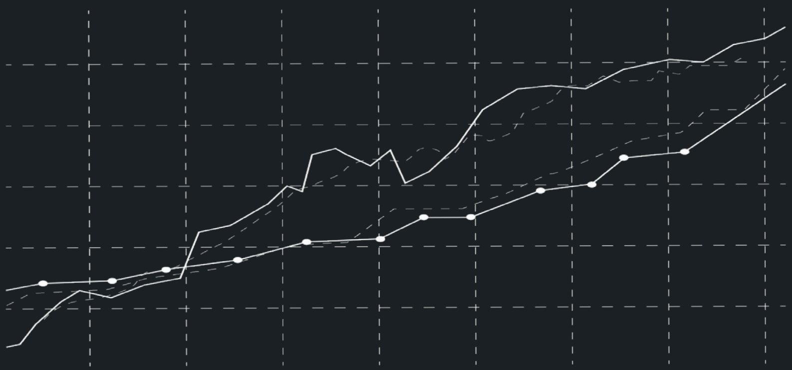
To qualify for inclusion in this screen, a company's current equity shares should be less than or equal to its equity shares from 10 years ago multiplied by 1.1. Additionally, the company should have demonstrated a sales growth rate of at least 10%, an average return of at least 10%, and a market capitalisation of at least 100.

Query

```
Number of equity shares <= Number of equity shares 10years back * 1.1  AND
Sales growth 10Years > 10% AND
Average return on capital employed 10Years > 10% AND
Market Capitalization > 100
```



By employing these criteria, we can identify companies that have exhibited consistent growth while maintaining their equity base and avoiding excessive dilution.

As a practice exercise, it would be beneficial to examine the companies identified through these queries and analyse their financial performance and growth prospects. Understanding the rationale behind popular screens and learning how to create similar themes can provide valuable insights for building a solid investment strategy.
