The maximum reward is:

Maximum reward = (Spread – Net premium paid) × Lot size
= (200 – 75) × 75
= ₹125 × 75
= ₹9,375

Now let us see what will happen in the best and worst case scenarios.

Particulars	Best-case Scenario	Worst-case Scenario
Nifty	25,200 and above	Less than 25,000
Outcome of buying Nifty 25,000 call	Gain = 25,200 – 25,000 – 75 = ₹125	Premium of ₹125 is lost
Outcome of selling Nifty 25,200 call	Premium of ₹50 is captured	Premium of ₹50 is captured
Net outcome (per unit)	Gain = ₹75 + ₹50 = ₹125	Loss = ₹125 – ₹50 = ₹75
Lot size net outcome calculation (₹)	Total gain = ₹125 × 75 = ₹9,375	Total loss = ₹75 × 75 = ₹5,625

If Nifty moves higher than 25,200, the profits from buying the Nifty 25,000 call option will be reduced by the losses from the Nifty 25,200 call option sold. Conversely, suppose the Nifty moves lower than 25,000. The loss from buying the Nifty 25,000 call option will be reduced from selling the Nifty 25,200 call option.
