These new accounting changes made India adopt more of the European accounting style. With that, a new line item was introduced known as Other Comprehensive Income. We have already understood basics about Other Comprehensive Income earlier.

PAT	805	861	962	927	1114	1131
OCI						
Remeasurement of defined benefit plan	0	-2	0	-6	-15	-1
Income Tax related to OCI	0	0	0	2	4	0
Exchange difference on translation	0	0	-2	7	15	-10
Total OCI	0	-2	-2	3	4	-11
Total Comprehensive Income	804	858	960	930	1118	1121

Going back to the Income Statement, we find that PAT is not the last item, but we enter multiple items for Other Comprehensive Income that are added to PAT to get the Total Comprehensive Income. This ratio OCI/Total Comprehensive Income here tells us the size of Other Comprehensive Income.

The income statement shows that the company was earning 1100 Cr, but only 10 Cr was due to OCI in FY 2021. This amounts is relatively low. Since it is negligible, we need not dig deeper into the OCI. If the contribution from OCI was high, we needed to study every line item added to the OCI.
