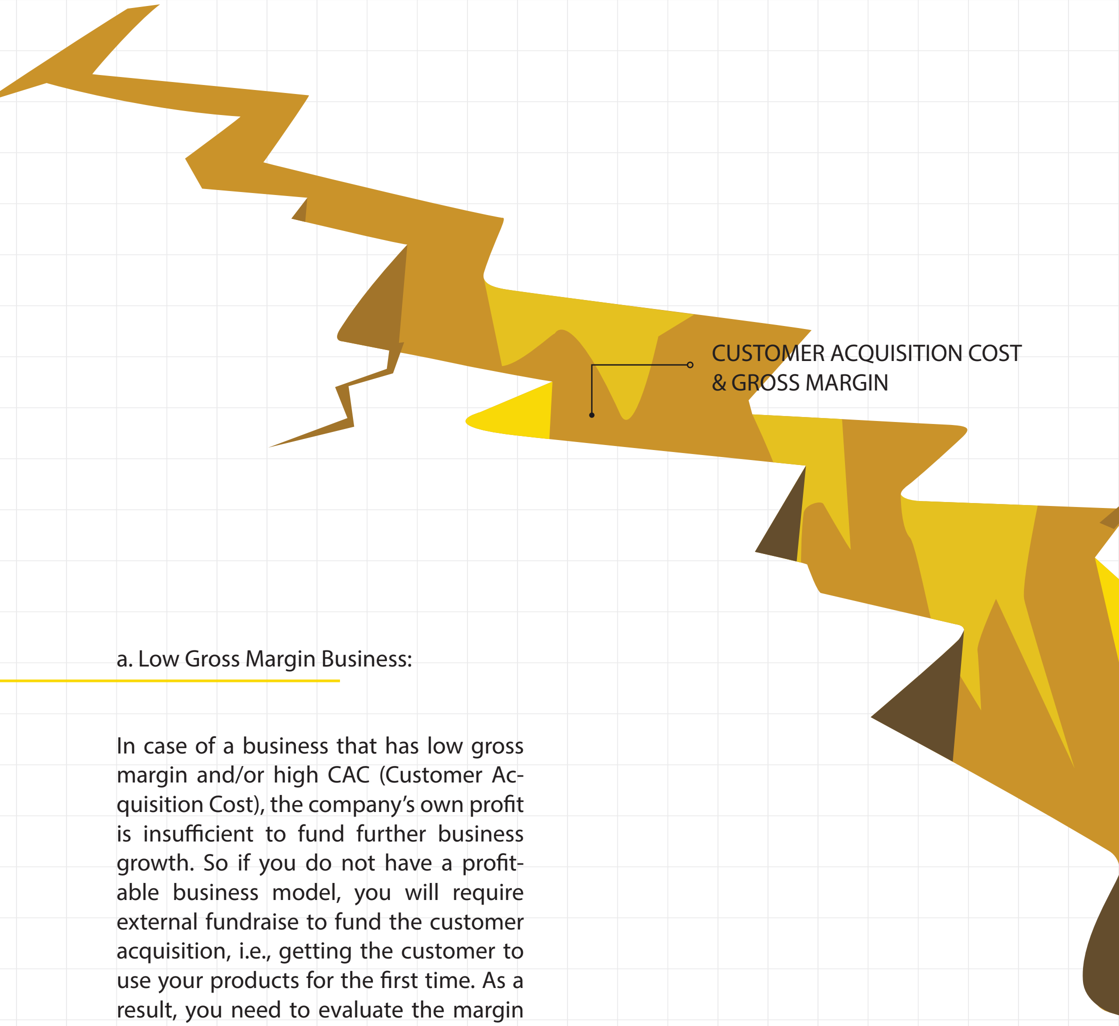
02. GROSS MARGIN



a. Low Gross Margin Business:

In case of a business that has low gross margin and/or high CAC (Customer Acquisition Cost), the company's own profit is insufficient to fund further business growth. So if you do not have a profitable business model, you will require external fundraise to fund the customer acquisition, i.e., getting the customer to use your products for the first time. As a result, you need to evaluate the margin profile of your company.
