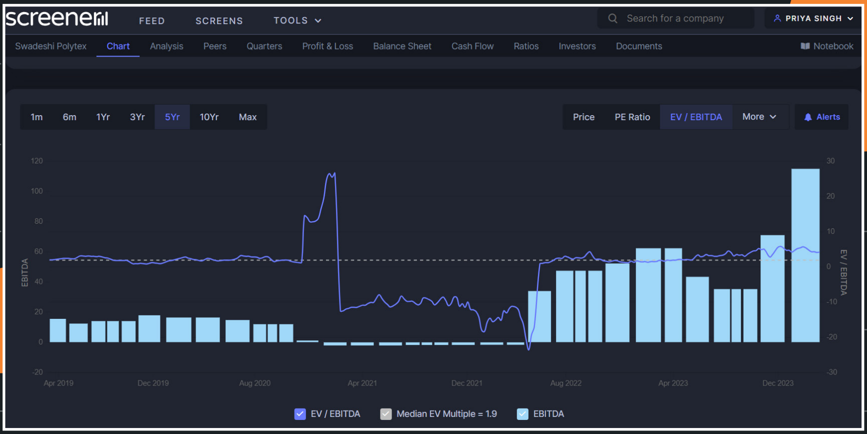
1.5 EV / EBITDA (Enterprise Value to Earnings Before Interest, Taxes, Depreciation, and Amortisation): This ratio compares a company's enterprise value (EV) to its earnings before interest, taxes, depreciation, and amortisation (EBITDA). It helps investors assess a company's valuation taking into account its debt, cash, and operating performance. A lower EV/EBITDA ratio may indicate that a company is undervalued relative to its earnings.



1.6 Price to Book: The price-to-book ratio compares a company's market price per share to its book value per share. It provides insight into how the market values a company relative to its assets. A low price-to-book ratio may suggest that a stock is undervalued, while a high ratio may indicate that it is overvalued.
