Summary

Sales figures indicate potential for selling more, charging higher prices, or maintaining stable demand due to competitive advantage.

High prices without loss of demand or low prices that are difficult to imitate signify significant competitive advantage and profitability.

Patented technologies or advantageous location contribute to cost advantage.

Cheaper cost for even one input provides cost advantage if competitors cannot replicate.

Some companies prioritize higher per-unit benefit over passing on cost benefits to consumers.

Higher margins may indicate competitive advantages.

Competitive advantages may manifest in future market share movements or margin comparisons with the industry.
