

Republic of Sakha, Siberia, and is considered the chilliest region in the northern hemisphere. The town is the coldest in the world and has been described as the most uninhabitable place on Earth. The lowest temperature ever

recorded was a staggering -90°F (-68°C). One group of indigenous people who choose to live and survive in this chilly town are the Yakut people, who are one of the only Arctic peoples to keep horses.

Everyday survival

The temperatures in this part of Siberia can get so cold that the moisture in a person's breath can freeze in the air and fall to the ground. Parts of the body can freeze incredibly quickly if they are not wrapped up warmly. The Yakut make clothes from a mixture of animal furs.

MILK STORAGE

In a town where everything is frozen, often the best way to keep food fresh is to leave it outside. Cows are milked inside sheds and the milk is then poured into any available pot. The milk freezes in minutes; it is then taken out of the pot and stored as round chunks.

Simply melt the milk block to drink it.

WATER COLLECTING

It may seem extraordinary in a snowy climate, but collecting water is more difficult than you might imagine. Snow does not provide a large volume of water so ice is generally collected. The people take a horse and sled to a frozen river and chisel off huge chunks of ice. The ice is then kept outside and used when needed.

A COZY HOME

Keeping a house warm is difficult if every time a door is opened, the cold air rushes in. For this reason some of the houses have three doors. Once you are through the first door you close it and go through the second, close it, and the third door takes you in. Warm rooms are essential.

BURSTING PIPES

Water pipes are susceptible to freezing in cold climates like that in Verkhoyansk. This pipe has burst and forced water up into the air. Because of the incredibly low temperatures it has frozen in midair, the water creating a huge ice sculpture.

The ice never melts when left outside in the winter.
