

Brachiosaurus

brackee-oh-SORE-uss

This huge sauropod had **longer front legs** than hind legs, so its body was sloped like a giraffe's. And just like a giraffe, Brachiosaurus got a lot of food from tall trees.

We lived in what
are now the forests
of NORTH AMERICA.

Small head
compared to body

Head crest

Big bodies

Like all sauropods,
Brachiosaurus had

powerful legs

to support their
incredible weight.
