

Quetzalcoatlus

ket-zal-KWAT-luss

Quetzalcoatlus wasn't a dinosaur or a bird – it was a pterosaur.

It was also **huge**, and possibly the biggest flying animal of all time.

We could **FLY** at a speed of around 90kph (56mph).

That thing is huge!

Big beak

Quetzalcoatlus' beak was 2.5m (8ft) long. That's longer than an adult person is tall! Its beak had no teeth so once it caught its prey, Quetzalcoatlus **swallowed** it whole.
