

Sharp
teeth

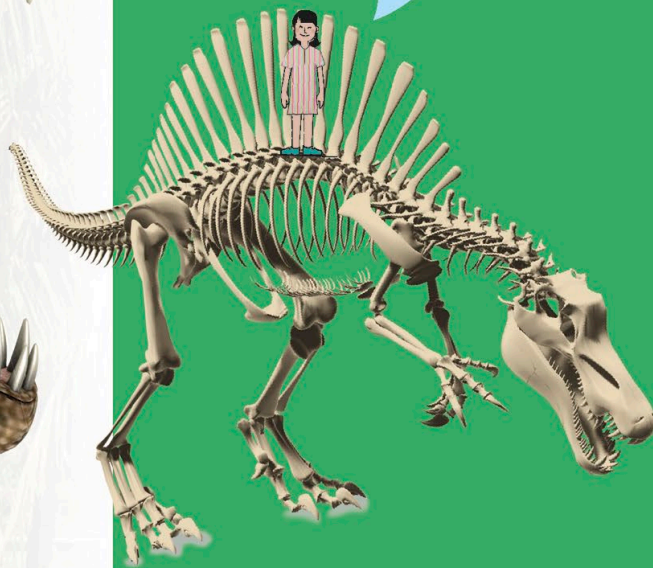

Move over,
Tyrannosaurus,
I'm the **BIGGEST**
PREDATOR around.

Spine lizard

Spinosaurus was named "spine lizard" for the **huge sail** on its back. It's not clear exactly what the sail was for, but some of the bones that made it up were bigger than a person!

Wow. I can't believe how
big Spinosaurus was!

Only a few Spinosaurus
bones have ever been
discovered, so experts
are still learning about it.

Spinosaurus
hunted giant
fish, such as
coelacanths.

Size: 16m (52ft) long

Habitat: Swamps

Diet: Fish
