

Compsognathus

COMP-sog-NAITH-us

Who says you need to be **big** to be a predator?

Compsognathus was small, but had pointy teeth, sharp claws, and swift legs to help it hunt.

We were good hunters, but if we found a dead animal we weren't above scavenging either.

Mini but menacing

Compsognathus was only a little **taller than a chicken**, but what it lacked in size it made up for in speed. Its hollow bones helped it stay light on its feet and it ran on tiptoes to be as quick as possible.
