

Sinosauropteryx

SIGH-no-SORE-op-ter-ix

A Sinosauropteryx fossil found in China in 1996 turned out to be one of the most important dinosaur discoveries. Why? It showed they could have **feathers**!

Fantastic feathers

Until Sinosauropteryx was discovered everyone thought all dinosaurs were **scaly**. But the Sinosauropteryx fossil had clear, fuzzy marks around its body that scientists realized were **feathers** to keep it warm.

Many other incredible fossil discoveries have been made in the Liaoning Province in China.
