

Defensive weapons

Fossils have shown that Tyrannosaurus and Triceratops often got into nasty fights. And as powerful as Tyrannosaurus was, Triceratops was not **easy prey**. Its neck frill acted as a thick shield and its horns were sharp, long, and strong.

We were about the size of an **ELEPHANT** but looked more like a **RHINOCEROS**.

Triceratops munched on low-growing ferns and probably lived in herds for safety.

Size: 9m (30ft) long

Habitat: Forests

Diet: Plants
