

Styracosaurus

sty-RACK-oh-SORE-us

While many dinosaurs had spikes, horns, or frills, Styracosaurus had **all three** – making it a seriously impressive looking herbivore!

The holes in Styracosaurus' skull were covered by skin.

Skull

The name Styracosaurus means "spiked lizard".

Horny head

Although its frill spikes looked impressive, they weren't very useful for fighting, and were just for show. Styracosaurus probably fought with its **nose horn** instead.
