

Our enormous skulls were about 1.8m (6ft) long – longer than an average adult person.

Frill spikes

Fully featured

Styracosaurus was smaller than its famous relative **Triceratops**, but it had a few extra features.

To go with its frill, it had a nose horn, cheek horns, and spikes running along its back and tail.

Size: 5m (17ft) long

Habitat: Woodlands

Diet: Plants
