

Needle-like
teeth

The diamond-shaped
flap of skin on the end
of my tail helped me
steer while flying.

Long, narrow
wings

Wing

Beak

Chew your food!

Its needle-like teeth were great for catching fish, but a well-preserved Rhamphorhynchus fossil has been found with recently caught whole fish in its stomach. This means Rhamphorhynchus probably **swallowed its food whole**.

Size: 1.5m (4ft) wingspan

Habitat: Coasts and rivers

Diet: Fish
