

The Jurassic

The second period of the Mesozoic was called the Jurassic. The mild climate created an environment for dinosaurs to **thrive**.

Sauropods like me were the biggest land animals ever.

Apatosaurus

Archaeopteryx

Allosaurus

Stegosaurus

I was possibly the first dinosaur that could fly!

JURASSIC PERIOD

200–145 million years ago

Changing weather

The Earth became cooler and wetter during the Jurassic. Rainfall helped new plants and lush forests to grow, which meant there was **plenty of food** for dinosaurs to eat.
