

Tyrannosaurus
fossil

Fossil hunters

Fossils are very rare. The ones that are found have been buried in the Earth for millions of years. Experts called **palaeontologists** dig up the pieces and study them for clues.

Pieces of a puzzle

It's rare to find full dinosaur skeletons, so experts often look at bones from several skeletons to make a whole one. It's a bit like doing a very difficult **jigsaw** puzzle.

Fossilized
Ginkgo plant

Animals, plants, and other living things can all become fossils too.
