

New discoveries about the past

You might think that because dinosaurs lived so long ago, we already know everything about them. But experts are making **new discoveries** all the time.

Tail feathers

Sometimes, new technology such as scanners and lasers lets us look inside fossils and work out what colour the dinosaur would have been.

Stuck in time

In 2016, a Chinese palaeontologist made a once in a lifetime discovery – a dinosaur tail trapped in **amber**. 100 million years earlier, a dinosaur became stuck in the resin and its tail bones, skin, blood, and feathers were totally preserved.
