

New (but old) animals

Scientists still discover **new dinosaurs**.

The duck-like Halszkaraptor was discovered in 2017. It had curved claws, a swan-like neck, and limbs that may have let it swim. Mansourasaurus is a new type of sauropod found in Egypt in 2018.

Halszkaraptor

Halszkaraptor might have lived on land and in water like a duck.

Mansourasaurus

I had flat teeth and a long neck, so I probably ate like a giraffe.

What did dinosaurs do?

Fossils help us understand what dinosaurs **look like**, but they can only tell us a little about how dinosaurs behaved. For this, scientists **compare dinosaurs to modern animals** such as birds, giraffes, lizards, or crocodiles, and try to work things out.

Some discoveries teach us where we've been wrong. For years we had no idea dinosaurs could have feathers, but now we know they did.
