

Types of dinosaur

There were so many types of dinosaur that it can be hard to keep track of them. Luckily, experts split them into **groups** and subgroups. Here are some of the main ones.

Suchomimus

Theropods (THERRO-pods)

These dinosaurs ranged in size, from the terrifying Tyrannosaurus to speedy Velociraptor. They all walked on two legs and ate meat.

A story of hips

Experts used to think that dinosaurs could be put into groups based on the **shape of their hips**, but new evidence suggests this probably isn't the case after all.

Tyrannosaurus

Velociraptor

Apatosaurus

Diplodocus

Sauropodomorphs (SORE-oh-POD-oh-morfs)

These enormous plant-eaters were the largest creatures to ever walk the Earth. They had long necks and tails.
