

What did dinosaurs **look** like?

Dinosaurs could be big, tiny, colourful, feathered, or scaly. There's no such thing as a "normal" dinosaur!

Compsognathus

Giganotosaurus

Some dinosaurs were really massive, but others, such as Compsognathus, were only about the size of a chicken.

Lookalikes

These amazing animals came in different shapes, sizes, and probably colours. Each type was unique but they did have some things in **common**.

Dinosaurs had scales or feathers. Some had both.

All dinosaurs walked upright on legs and had claws on their fingers and toes.

Every dinosaur had a tail.
