

What are reptiles?

Snakes, lizards, crocodiles, and tortoises are all reptiles. They have several things in common.

Their bodies are covered in waterproof scales.

They are cold-blooded and need the Sun to warm up.

They all hatch from eggs.

My name means "Earth lizard" because scientists used to think that I lived on land.

Geosaurus

Desmosuchus

Dakosaurus

This marine predator roamed the oceans of the Jurassic and Cretaceous. It was a speedy swimmer with a **brutal** bite.

Geosaurus

Geosaurus was a strange-looking predator that swam around the Jurassic and Cretaceous oceans **hunting** for fish.

Desmosuchus

This Triassic reptile was a relative of the modern crocodile. Desmosuchus had **bony** plates along its back and tail.
