

Plains

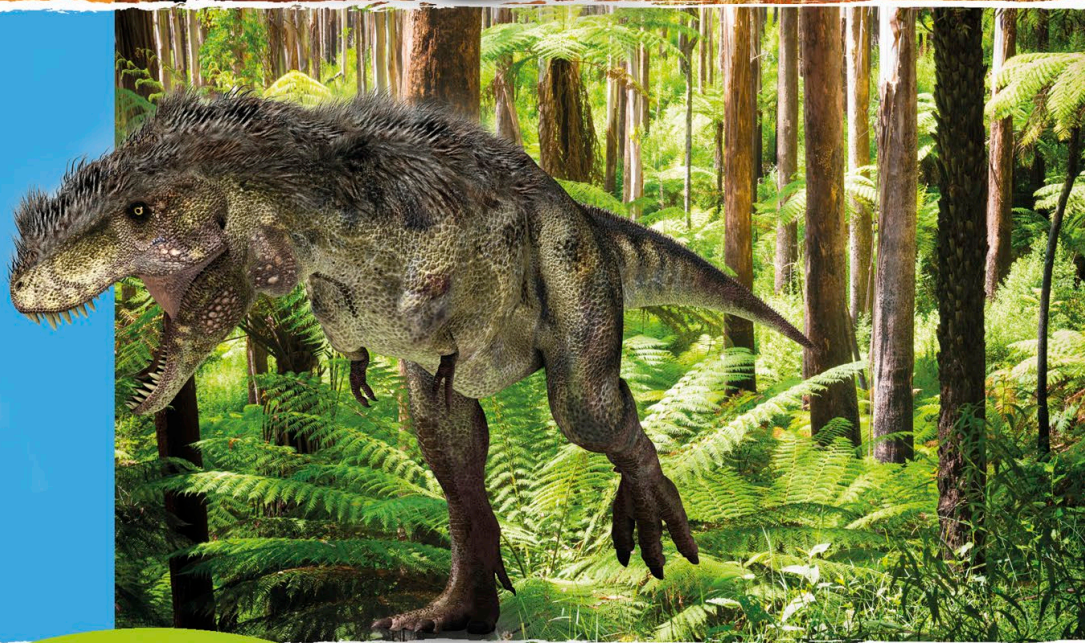

Open plains and scrublands were perfect places for herds of dinosaurs to **roam** across in search of food.

It was hard for predators to sneak up on me on flat plains.

Woodlands

Dinosaurs liked forests because there was so much to eat. Some woodlands were **cool** and others were hot and **swampy**.

The Earth has changed a lot since dinosaurs existed. Some fossils found on beaches were from dinosaurs that lived in the mountains.

While many dinosaurs lived by water, none of them lived in it. Other reptiles such as **plesiosaurs** ruled the oceans.
