

Dinos for dinner

Predatory dinosaurs were the deadliest animals to ever walk the Earth, but hunting was dangerous, and they needed **weapons and skills** to get the job done.

Deinonychus

Brains over brawn

Some carnivores, such as Deinonychus, were **clever**, and had well-developed brains and senses. They may have hunted in packs to trap their prey.

Special weapons

Spinosaurus **specialized** in hunting one type of prey. It had long, narrow jaws full of cone-shaped teeth to grip onto wet, wriggling fish.
