

Herrerasaurus

heh-RARE-ra-SORE-uss

We had a flexible lower jaw that helped us cling to our prey.

This swift predator from the middle of the Triassic was one of the very **first** dinosaurs to have existed.

Early hunter

The early dinosaurs were smaller than many of the giants that would come later. Scientists think *Herrerasaurus* might have been an early **theropod**, but new evidence suggests that may be wrong.
