

Even though *Herrerasaurus* was small compared to many predators, it was bigger than most other animals at the time.

I was named after the farmer in Argentina who discovered my fossils.

Stagonolepis

Lonely dinosaur?

There weren't many other dinosaurs around when *Herrerasaurus* was alive, but luckily there were other **early reptiles** such as *Stagonolepis* to feast on.

Model of
a skull

Size: 6m (20ft) long

Habitat: Woodlands

Diet: Meat
