

FOLDED STAR

1 The star consists of a calico foundation square with four rounds, or layers, of triangles on top. Cut the calico to the finished size plus 5cm (2in) on all sides. For rounds 1 and 3, cut 12 10cm (4in) squares from fabric A. For rounds 2 and 4, cut 16 10cm (4in) squares from fabric B.

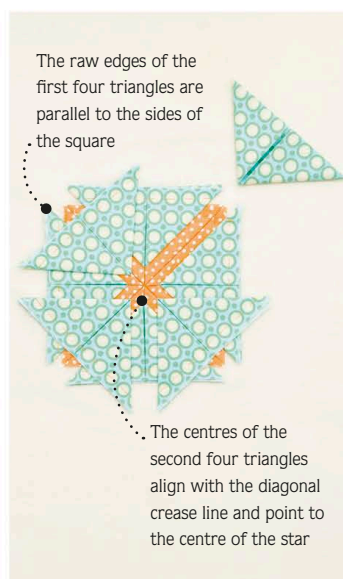

2 For the triangles, with wrong sides together, press each square in half. Fold one top corner of the resulting rectangle to the centre of the raw edges and press. Repeat, folding the other top corner to the raw edges to make a right-angled triangle with raw edges along its long side.

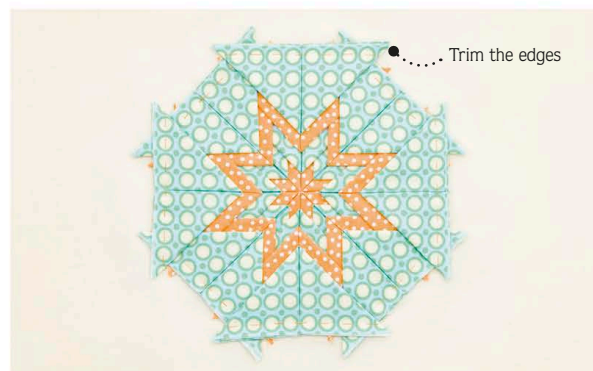

3 To make guidelines, fold the foundation square in half horizontally and vertically and press. Fold in half again along the diagonals and press again. Open the square out.

4 For round 1, place the four fabric A right-angled triangles along the pressed guidelines, so their points meet in the centre and the folded edges are on top. Pin or tack in place along the raw edges. Secure each point with a small hidden stitch.

5 For round 2, place four fabric B right-angled triangles with their points 1cm ($\frac{3}{8}$ in) from the centre, and with their raw edges parallel with the sides of the foundation square. Secure as in Step 4, then add four more fabric B triangles in the gaps, aligning their raw edges with the diagonal guidelines on the foundation square. Secure as before. Measure 1cm ($\frac{3}{8}$ in) from the points and mark.

6 Add eight fabric A triangles for round 3 in the same way as the eight were added for round 2, followed by eight fabric B triangles for round 4. Remove the tacking and trim and finish all the edges as desired.
