

▶ MACHINE APPLIQUÉ GENERAL TECHNIQUES

Machine appliqué is quick and will stand many washes, especially if you use a tightly woven fabric and finish the edges with zigzag or satin stitch. Before you begin, it is a

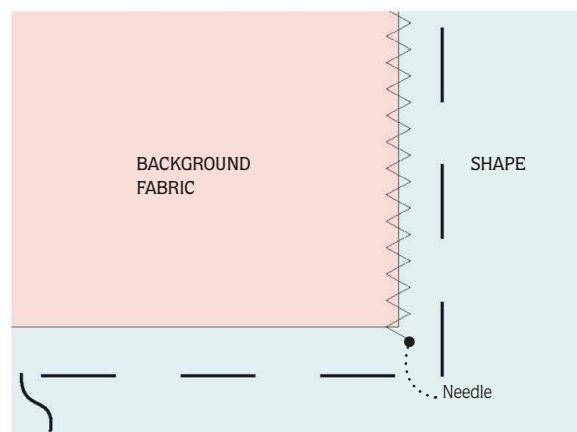

good idea to practise on scraps of the fabrics you will be using. Try out different stitch widths and lengths to see what works best.

OUTER CORNERS

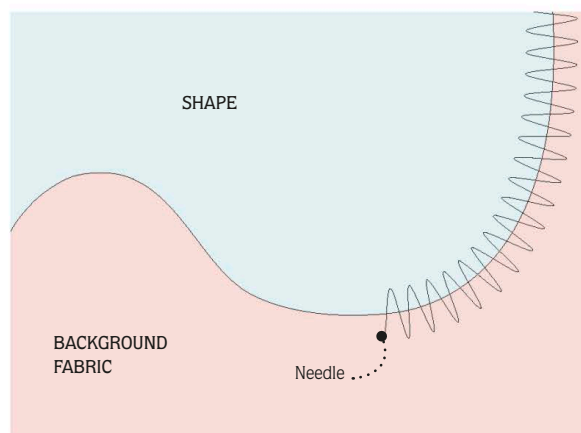

To work outer corners, stop with the needle outside the shape on the right-hand side. Lift the foot, turn the work, and continue.

INNER CORNERS

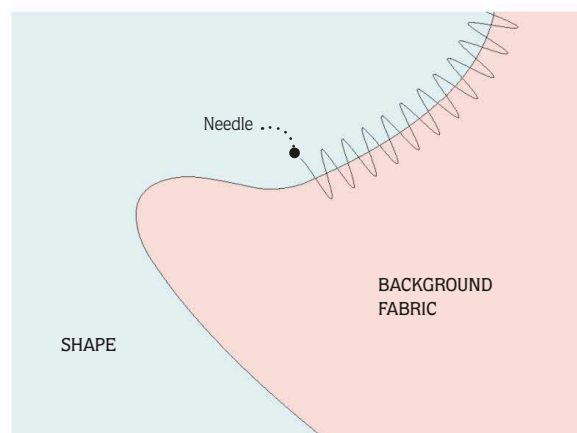

To work inner corners, stop with the needle inside the shape on the left-hand side. Lift the foot, turn the work, and continue.

CONVEX CURVES

When approaching convex (outer) curves, stop with the needle just outside the shape. Lift the foot, turn the work to align it with the direction you're sewing, and continue.

CONCAVE CURVES

When approaching concave (inner) curves, stop with the needle inside the shape. When working any kind of curve, you may need to stop frequently to turn the work slightly, then take a few stitches, then stop, and turn again.
