

▶ TURNED REVERSE APPLIQUÉ

This method uses an extra piece of fabric stitched to the main fabric and then turned through to create a window for your desired shape to show through. It is a quicker method of traditional reverse appliqué (see pp.122–123) and can give a cleaner, neater edge. This method works

best on simple shapes. You may see the edges of the turned-through piece of fabric, so either use a fabric to complement your design, or the same fabric as your main fabric.

1 Choose a fabric with a motif suitable for appliqué. Using a sheet of tracing paper, trace around the object with a pencil. Add your desired space around the object.

2 Cut out the traced shape along the outside line. Place the template on the wrong side of the lining fabric to be turned through. Trace around the template.

3 Position the lining fabric on the main fabric, right sides together, where you'd like the shape to appear. Pin the lining fabric in place.

4 Using a sewing machine, stitch along the motif outline through both the layers of fabric.

5 Using sharp scissors, cut inside of the stitched shape leaving approximately a 3–6mm ($\frac{1}{8}$ – $\frac{1}{4}$ in) seam allowance.

6 Snip into any curves and trim any points without cutting through the stitching.
