

QUILTING OR ROCKING STITCH

1 Place the area to be worked inside a large embroidery hoop. Bury the knot as in Knotting to begin (see opposite). Place one hand under the quilt where the needle should emerge.

2 With the needle between thumb and forefinger of your needle hand, push the needle with your thimbled finger straight down until you feel the point with your underneath hand. Stop pushing.

3 With your underneath finger, push up gently against the side of the needle and the quilt. At the same time, push down with your top thumb and make a bump in the layers while you push the needle sideways back through to the top. Stop pushing when the length of the needle protruding on the top is the same length as the next stitch.

4 Use the thimbled finger to bring the eye of the needle upright again, while at the same time pushing in front of it with your thumb. When the needle is upright and the point breaks through the fabric, push down as in Step 1.

5 Continue this motion until the needle has as many stitches as it will hold. Pull the needle and thread through. Repeat.

STAB STITCH

1 Place the area to be worked inside a large embroidery hoop. Stab stitch is an alternative way to work on thick quilts. Use a thimble on each middle finger. Bury the knot as in Knotting to begin (see opposite). Push the upright needle straight down through all layers. Pull the needle and thread through to the back.

2 Push the upright needle back up through all layers, working a stitch length away from the previous stitch. Pull the needle and thread through to the top. Repeat.
