

4 Measure the circumference of the width of your device, divide by two, then add 2.5cm (1in) to the total. Then, measure the circumference of the height of your device, add 15.5cm (6in), then multiply by two. Measure and cut a strip of fabric with these dimensions.

5 Fold the strip in half lengthwise. The folded edge will be the top, front edge of the cover. Place the device on the strip and then fold the folded edge up and over the front of the device so that it sits just below the top edge of the device, as shown. Measure and mark a line approximately 6.5cm (2½in), or the length of your choice, from the top of the device to create the flap. Cut along the line just marked. Mark a second line where the top of the device sits.

6 Open up the fabric strip and measure and mark a line in the centre of the fabric, where it was previously folded.

7 Cut a piece of wadding to fit on one half of the fabric strip, from the halfway line just marked to the opposite edge. Trim it slightly smaller all around so that it sits just inside the edges of the fabric. Fold the other side of fabric lengthwise over the wadding, on the marked line, aligning all of the edges.

8 Fold the folded edge of the strip up to just below the line that marks the top of the device. Pin on the line. Cut a piece of Velcro® slightly shorter than the width of the fabric strip. Pin the rough side of the Velcro® just below the folded edge, on the front.

9 Using a matching thread, topstitch around all four edges of the rough Velcro® piece to attach it to the front of the cover.
