

10 Pin the soft side of the Velcro® to the inside of the flap, only through the inside piece of fabric and wadding, so that when the flap is folded over the two halves of Velcro® will meet one another. Place your device inside the roughly constructed cover to ensure the placement is correct. Topstitch the piece of Velcro® in place being sure not to stitch through the outer fabric flap.

11 Carefully remove the paper from your flower and pin the flower on the front of the cover, in the location of your choice.

12 Using a matching thread, topstitch around the outer edges of the flower to attach it to the front of the cover only.

13 Fold the front of the cover back up in place so that the folded front edge sits just below the line. Pin around the three raw edges of the cover.

14 Starting in the bottom left corner, sew around the three raw edges using a 6mm (1/4in) seam allowance.

15 Pin the bias tape around the three raw edges, mitring the corners and folding under the raw edges of the bias tape at either end.

16 Using a needle and matching thread, attach the bias tape to the edges. We've used a running stitch, weaving back and forth through all the layers at one time.
