

Pin the lining, zip, and front together, aligning all three

13 Lay a piece of the lining fabric right side up, then lay the zip right side up aligning the top edge with the top edge of the lining. Lay the bag front wrong side up on top of this, aligning the top edge with the top edges of the zip and lining. Pin through all three.

14 Put a zip foot on your machine and stitch through all three layers. Fold the front and lining down on either side of the zip so they both face right side out.

15 Lay the second lining piece right side up, then lay the free edge of the zip – right side up – to align with the top of the lining fabric, then lay the main back fabric right side down on top. Pin through all three layers aligning the edges as in Step 13.

16 Stitch along the edge to attach the zip. Fold the back and back lining down so that the zip is visible between the front and back bags on both the main and lining fabrics. Press as shown. Topstitch at this point if you want. Open up the zip by a few centimeters (inches) so that the pull sits within the main fabric.

17 Using a long quilter's ruler and a rotary cutter and cutting mat, trim all the edges and the ends of the zip even with one another so that the entire width is 23cm (9in). Make sure all the layers are flat and straight before cutting. Trim the bottom edges of the bag front and back so that they sit 24cm (9½in) away from the zip.

18 Fold the bag in half at the zip so the front and back of the main fabrics sit right sides together. Align all the edges and pin around the three raw edges, through all four layers. Leave the zip open.
