

QUILT SIZES AND MEASUREMENTS

Standard bed sizes vary around the world, so depending on where you live you may need to adapt a pattern to fit your specific needs. Mattress depth is another factor that can vary significantly and will influence the way your finished quilt looks

on a bed. A deep mattress will make a quilt look much smaller than a shallow mattress of the same size. Follow the simple instructions below to measure up your bed for the perfect quilt size.

To calculate the quilt size needed for a specific bed, you will need to accurately measure the bed itself. Do so by using a measuring tape to record the width, length, and depth of the mattress. Using these three measurements you can design and fit a quilt to any size mattress.

When calculating the depth of the mattress be sure to add the measurement of the depth twice to the width (one for each side of the quilt) and only once to the length (for the bottom).

If you want the quilt to hang or drop below the mattress, you will need to add a few additional centimetres (inches), depending on your requirements. You will need to add the drop twice to the width and once to the length, as above.

To add a pillow tuck to your quilt you will need to add approximately 45cm (18in) to the length of your quilt. Measure the height and depth of the pillows to be covered, then add a few extra centimetres (inches) to allow for the tuck.
