

► CURVED BLOCKS

Probably the most popular of all traditional curved blocks is the drunkard's path (see pp.86–87). When the orientation or colour values of the four units is altered, a number of complex curving patterns result. Changing the size and shape of the curves alters the block considerably.

► MOSAIC BLOCKS

Though many of these can be machined, most are made by piecing together geometric shapes using the English paper-piecing method (see p.88). The most familiar block is grandmother's flower garden.

► FAN BLOCKS

Fans are based on quarter-circles and can be arranged in a number of different ways. However they are arranged, a curving pattern results. Variations such as Dresden plate patterns are full circles and are often appliquéd to a background. The segments can be curved or pointed, or both. The centre can be open to allow the background to show through or applied separately for contrast.
