

▶ EQUILATERAL TRIANGLES

Joining equilateral triangles requires slightly off setting each triangle using the “dog ears” left by the previous

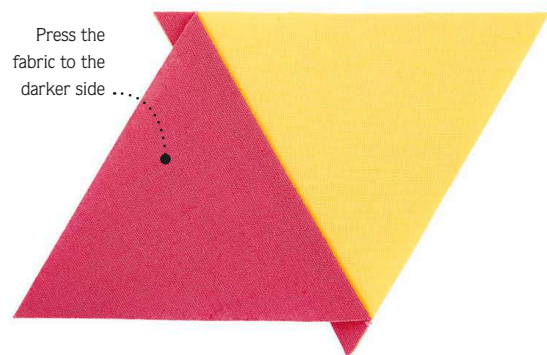

seam. This will ensure that the finished row is straight and even.

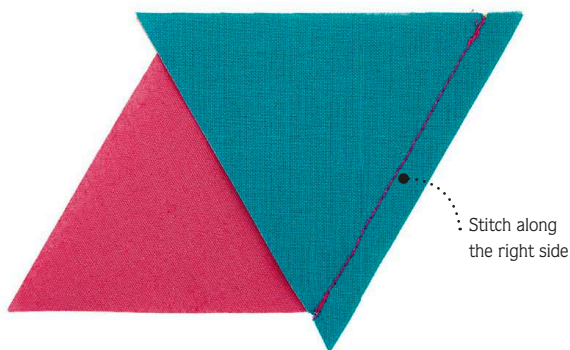

1 Using a rotary cutter and quilter's ruler with 60-degree guides, cut out your triangles.

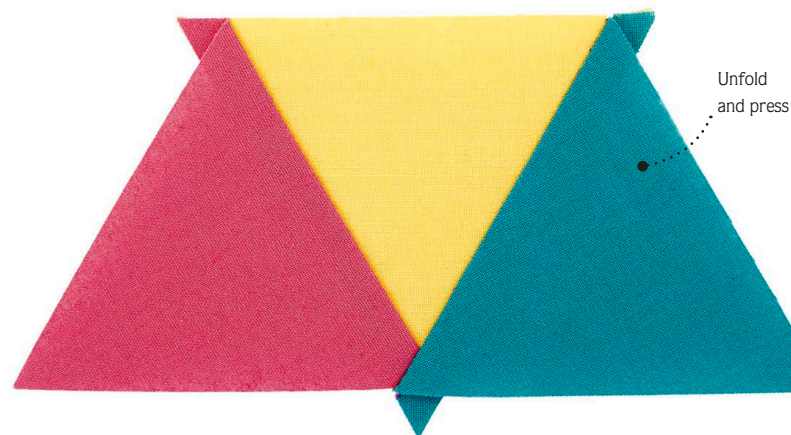

2 Align two of the triangles, right sides together, and carefully stitch along one side.

3 Unfold and press the seam allowances towards the darker fabric.

4 Using the ears from the first two triangles as a guide, align the third triangle and pin. Carefully stitch along the edge of the triangles.

5 Unfold and press. Repeat Steps 2–4 adding as many triangles as your design requires.
