

INTRODUCTION

Making a quilt is an absorbing and rewarding activity and, with a little bit of know-how, it is something anyone can achieve. With the help of this book, you will learn dozens of techniques so you succeed with your very first quilting project. Or, if you are a seasoned quilter, you may be inspired to learn or try a technique you never knew before.

By learning the skills needed for each project, you will feel comfortable with the different aspects of quilting. Becoming confident with your sewing machine and starting with some of the simple projects first will lead you through to completing more advanced patterns in no time at all.

In some cases, you will find several different options for completing parts of a project, such as attaching a binding. Try these out and see what suits your style and comfort level best. There is no right or wrong answer in quilting so just remember to adjust your fabric requirements if needed. If something doesn't look right, simply take it apart and try again.

Some people find choosing their fabrics to be a challenging part of the process, but with an understanding of the colour wheel you will soon be on your way to designing your own visually appealing quilts. A good starting point is to pick one fabric you like and build the design from there.

Quilting should be fun and relaxing, and if something doesn't work straight away, simply take a break and try again. Soon you will see how rewarding completing your first quilt is, and you will want to carry on making more beautiful projects to give as gifts or to keep for yourself and pass down through your family.
