

FOLDED PATCHWORK

There are a number of specialized patchwork techniques that involve manipulating fabric by folding it in specific ways before joining pieces together. They can all be

used to make quilts, but because they are, by definition, made from more than one layer, they are also good for making household items, such as placemats.

CATHEDRAL WINDOW

Fold the seam allowance to the wrong side and press

1 Decide the size of the finished square (10cm/4in) and multiply the measurement by 2 (20cm/8in). Add 1.2cm ($\frac{1}{2}$ in) seam allowance and cut four squares this size from the background, fabric A.

2 Fold the seam allowance down and press each side of the square flat. Diagonally fold one way and press, then fold along the other diagonal and press firmly to mark the exact centre. Open out.

Fold each corner to the centre

3 Fold each corner of each square to the centre and press the folds firmly. Make sure that the new corners are sharply defined.

4 Take a small cross stitch across the centre into each point, through all the layers to hold the points in place.

5 Fold each corner to the centre again and press firmly. Take a small cross stitch as before through all the layers to hold the points in place. The square is now half the size of that cut in Step 1.

Stitch two squares along one edge

6 With folded edges together, join the four squares in pairs, oversewing with tiny stitches along the edge. Then join the two pairs to make a square. If you are making a large piece, you can also work in rows that are joined before the windows are added.

Place the window square on the quarter segment of the background square

7 Cut four contrasting window squares from fabric B. Each window square should just fit inside a quarter segment of the background square; to work out the size, measure the distance from the centre of one folded square to the outside corner.

8 Place the first window square over a seam, on the diagonal. Pin in place. If necessary, trim the edges slightly to make it fit.
