

OCI Segment

Now, let us discuss OCI (other comprehensive income) segment. Here we will add all the items that we see as it is.

1

First, we will add the OCI segment for remeasurment of defined benefit plans

2

Income relating to items that will not be reclassified to profit or loss will be included

3

Next, we have to add the exchange difference on translation of foreign operations.

Non-Controlling Interest	42(b)	(5.08)	5.63
Other Comprehensive Income			
Items that will not be reclassified to profit or loss			
Remeasurement of Defined Benefit Plan		(0.99)	(14.63)
Income tax relating to items that will not be reclassified to profit or loss		0.28	3.58
Items that will be reclassified to profit or loss			
Exchange difference on translation of foreign operation		(10.15)	(14.59)
Total Other Comprehensive Income/ (Loss)		(10.86)	3.54
Attributable to:			
Shareholders of the Company		(11.22)	3.42
Non-Controlling Interest	42(b)	0.36	0.12
Total Comprehensive Income for the year		1,115.27	1,125.59

We can see that the items of Other Comprehensive Income Statement are shared by the company. We need to enter those in our model and add them together to reach at Total OCI. We can then add Total OCI to Profit After Tax that we had calculated. This will give us Total Comprehensive Income for the company. With this we have calculated the Income Statement for the company. Only thing that would be left is entering the EPS that we will do shortly.

53	OCI					
54	Remeasurement of defined benefit plan				-15	-1
55	Income Tax related to OCI				4	0
56	Exchange difference on translation				15	-10
57	Total OCI	0	0	0	0	4
58						
59	Total Comprehensive Income	0	0	0	0	1118
60						
61						

At this step, it is important that we compare the reported Comprehensive Income with the Income that we have calculated on our excel. It should not have any difference unless we have 'normalized' any line item.

Here in case the numbers do not match, two types of mistakes are very common particularly when starting out. First, we might have missed on a line item and we might have not entered the same. Or else we might have entered a number but with opposite sign i.e. we might have subtracted an item that we had to add.
