

Now we need to compare the reported values with the values that we have calculated. In case there are any differences, it must have a reason for the same. We must make sure that our inputs are error free. The sum of all the long-term liabilities is Rs. 561 Cr for FY2021 and Rs. 249 Cr for FY2020.

13	Long term Liabilities							
14	Long term Borrowing					108	93	
15	Long term Provisions					52	58	
16	Other non-current liabilities(Reverse Float/Non-							
17	interest bearing liabilities)	0	0	0	0	7	14	
18	Operating long term liabilities							
19	Non- categorized long term liabilities							
20								
21	Deferred Tax liabilities					82	398	
22								
23	Total Long term liabilities	0	0	0	0	249	563

Current Liabilities

Next, we will enter the values of the various current liabilities.

Trade Payables value has been entered in the Annual Inputs tab. We will get the same automatically calculated.

We see the line item- Other Current Liabilities in the Balance Sheet and we need to understand the break-up of the same in the notes to accounts. We had earlier referred to the same while entering numbers for Annual Inputs.

25	Current Liabilities							
26	Operating Items-							
27	Accounts payable	0	0	0	0	621	1007	
28	Other operating current liabilities(Float/ Non							
29	interest bearing liability)	0	0	0	0	789	1149	

Going through the same, we had categorized line items like Advance from Customers and Accrued Expenses as separate line items. We identifies whatever was left under this tab as Non-interest bearing dent like other current liabilities.

These line items will automatically come up in our balance sheet from the Annual Inputs tab. We see in the above table that we get Accounts Payable from Annual Inputs and then we also get Other Operating Current Liability automatically.
