

However, if the values do not match, we have made some errors somewhere. For example, we might have accounted for something twice or we might have missed out something. Remember, mistakes like these are very normal and that is what practice does. It helps you make less mistakes. Even the most experienced analysts make mistakes.

This is a common mistake because we are dealing with a lot of data here. It might confuse someone who is not used to calculations, financial statements, or large numbers. So you need to take some time and carefully find out what you are missing. There might be something that has not been taken into account.

With this, we have completed the entire Income Statement and Balance Sheet. All you have to do is enter the yellow cells, and the remaining numbers will populate from the previous inputs.

*all you have to do is enter the
"yellow numbers" in the template*

The balance sheet and the income statement for the company are ready for two years. You have to do the same calculation for the previous years.

Now that we have completed Income Statement and Cash flow statements, let us move on to Cash flow section. Once that is done, our raw data will be ready and we will then move to the analysis of each line item. This will give us insights into the health of the company.
