

Sum of Non-cash and non-operating/CGFO	0.07	0.05	0.03	0.07	0.09	0.12
Total Operating Working Capital Changes	-9	-177	-173	-212	5	-145
Total Financing Working Capital Changes	7	37	-4	33	51	172
EBITDA/ CGFO	0.96	1.08	1.10	1.09	0.94	0.95
Current Tax Expense/ Taxes Paid	0.99	1.01	0.87	0.99	0.98	1.08
Sum of Last 7 years CFO/Sum of last 7 years PAT						1.036831533

The Sum of the last 7 years' CFO/Sum of PAT should be in the range of 0.8 to 1.2. This ratio is 1.04, which lies in the range.

Thus, the company seems to be generating enough cash, i.e., in line with the PAT. Thus, **to summarize, we can say that the company's profits are converting into cash.**

When we analyze a company from an investment point of view, it is essential to check if the company is generating enough cash from its core operations.

A company that is not generating enough cash won't be able to push for growth through investments, give dividends, or serve its interest payments. So it is essential that a company generates operating cash flow to serve its investor interests.
