

So, if **CFI/CFO is in the negative**, it means that the company has **used up more than it has generated in cash flow from the business**. This is not a negative sign. It just means that the company is investing aggressively in its future growth. Will the company be able to generate additional sales from this going ahead is another question that is beyond cash flow statements.

This means they have taken some form of loan or equity to finance that. Or else, as seen they might have consumed a large part of their cash flow.

Net Cash Invested in Financing Assets	-331	-770	192	-279	523	-1354
Cash generated from investing activities	6	13	23	19	24	18
Taxes Paid for Investing Activities	0	0	0	0	0	0
CFI	-491	-879	39	-513	103	-1688
CFF						
Debt Issued/ Redeemed	12	6	0	-9	33	17
Equity Raised/ bought back	0	0	-504	0	0	0
Dividends paid(inclusive of taxes)	-403	-32	-293	363	-825	-1

We will see that in years that the company did not invest as much, they announced buybacks and dividends. We will understand these going ahead in Cash flow from financing activities.

Every business has a plan to **generate profit or cash from CFO** and then they have a choice to put it in **CFI (cash flow from investing)** or in cash flow from financing in **paid dividends, interests, buyback shares, repay loans, etc.**
