

Total Operating Working Capital is the part of total capital that is tied in short term assets and liabilities required for routine business operations. The remaining part of short term assets and liabilities is Non-operating or Financial working capital.

Non-Operating Working Capital						
Surplus Cash & cash equivalents	132	100	164	190	703	452
Short term loans and advances	98	127	228	223	286	298
Other current non-operating assets	12	13	12	12	17	17
Current Investments	569	1390	1115	1151	720	176
Total Non- Operating current Assets	810	1630	1518	1577	1726	943
Short term Borrowings	74	93	115	103	144	202
Short term provisions	12	14	13	20	22	25
Total Non-Operating Liabilities	87	107	129	122	166	227
Total Non -Operating Working Capital	724	1523	1390	1455	1560	716

As seen from the image, the selected portion of assets and liabilities shows Non-operating working capital.

The company has relatively more discretion around how it plans to manage non-operating working capital. For instance, they can re-finance short term borrowings with long term borrowings. They can keep capital as investments or distribute the same as dividends.

Let us get started with our analysis of operating working capital and understand how efficiently it is being used.
