

Other Current Liabilities

We now move on to other current liabilities. We will look at non-operating liabilities within other current liabilities.

Other Current Liabilities						
Float like items w.r.t. Revenue	0.013	0.014	0.015	0.016	0.017	0.018
Non-interest bearing debt like items w.r.t revenue	1.62%	1.85%	1.64%	1.83%	3.17%	6.30%
When is payment due?						
Resources to make payment?						

We first look at Float-like Items w.r.t. Revenue. Float-like items include advances from customers; deposits received, etc. Non-interest-bearing debt-like items are also expressed w.r.t. Revenue. However, we also need to be careful that these also include operating items. Before drawing any conclusions, we must keep in mind about operating items as well.

Going further under capital structure, we will understand how large is the float for the company. So, we need to understand

How big is the float for the company

How big are the one-time receivables

Some questions to ask in case of other current liabilities are:

- ◇ When is the payment due? Are these items one time or recurring in nature?
- ◇ Does the company have enough resources to make the payment or deliver its services? We need to know whether the company has enough resources to pay the liabilities and what those resources are.
