

Current Investments

In this section, we will talk about Current Investments and understand them in detail.

We need to understand current investments as a percentage of total assets. As seen, the company has a large portion of its assets in Current Investments, which decreased in FY 2021 to 2 percent. Current Investments/Total assets has decreased slowly and steadily. As this number is relatively high, this is an important asset for the company.

Current Investments						
Current Investments/ Total Assets	15.32%	29.11%	21.44%	19.46%	11.02%	1.99%
Compute the return generated on Current Investments. Compare against WACC for short term borrowings						
Purpose of current investments. What the company intends to do with it						
Form of investments. Equity/ Debt/ MF. Compare with purpose						

A set of questions need to be asked to analyze the Current Investments. These are-

Compute the return generated on Current Investments and compare it against WACC for short-term borrowings

Thus, we need to know the rate of return generated by the company for Current Investments.
