

Regularity of CAPEX required for a particular company needs to be understood, whether or not the company needs to invest every year, whether the investment is compulsory, whether the investment is a large portion of cash flow from operations, etc.

In that case, the company is unable to make any sizeable free cash flow as constant reinvesting in the business is required.

However, for companies where the reinvestment requirement is low, the company can distribute dividends, do buybacks, and have surplus cash to explore new business options.

As seen, the average CAPEX for this company for 7 years is 286 Cr, according to the Balance Sheet of the company. We should compare with total assets of the company to understand if this is a large number or not.

What are the major forms in which productive fixed assets are utilised						
Evaluate Non-Productive assets as investments						
Evaluate Segmental Utilisation of resources and profits on it at the end						
Total life (Gross Block/Depreciation)	14.97	14.03	14.29	14.27	13.15	12.35
Remaining Life (Net Block/ Depreciation)	7.56	6.86	6.68	6.87	6.72	6.39
Used Life	7.41	7.17	7.61	7.40	6.44	5.96
Maintenance Capex						
Growth Capex						
Check for Regularity of capex required just to stay in business (way of business- follow CFI in operating assets)
