

Non-interest bearing debt like items w.r.t. Revenue

The next item we need to understand are items that are not float-like. These are basically the non-interest-bearing items. These one time payables are debt-like items which need to be paid at a specific time. We identified these items when we were entering raw data in Annual inputs.

EXAMPLE

If the company has received advance against one large single order or tax liabilities, these are non - interest bearing debt like items.

We need to analyze these items with the help of the following questions.
These are-

- ◇ When is the payment due? In what form?
- ◇ Does the firm have the resources to make the payment?

We first need to understand in what form is the liability to be paid and in what time frame.

Non-interest bearing debt like items
