

It is mandatory for listed companies to report employer strength each year. With data for employees added every year, we can see the trend of the addition of employees. We can also find out if the sales are increasing in the same ratio as that of the employees. If we find that the company is adding employees at a good rate, it generally indicates optimism and good growth going further.

Also, if the employee's average salary is increasing at a fast pace, it usually means that the company is hiring many senior employees. If the number of employees are growing fast or the management is hiring senior staff, these can be good early indicators of expected growth going ahead.

Paid Yearly/ Total employee benefit	95%	94%	94%	94%	93%	93%
Accruals/ Total employee benefit	5%	6%	6%	6%	7%	7%
Try calculating number of employees and avg increment in salaries of the personnel						
Depreciation and Ammortisation						
Check D&A/ Revenue from common-size.						

The above items and questions will help us understand Employee Benefit Expenses. These are particularly important for service businesses like IT. We may track additional KPIs here like Average revenue per employee and employee occupancy rate.

In the next section, we will discuss Depreciation and Amortisation in the company.
